

Economically efficient and with a high performance – the new Entry Line Gigabit Switch with PoE+ of MICROSENS

Hamm, 25 June 2015 – For years, the Entry Line series of MICROSENS has been standing for economically efficient and high-performance industrial Ethernet solutions. With four Gigabit copper accesses with PoE+ and two dual-speed SFP slots for the connection of optical fiber, the new 6-port Gigabit switch offers great benefit at low cost.

No matter whether video-monitoring, security technology, or WLAN access points are concerned – a continuously increasing number of end devices has to be supplied with a constantly increasing performance and requires data rates in the Gigabit range more and more frequently. The new Entry Line Gigabit switch with PoE+ fulfils these rising demands in an optimal manner. Its four 10/100/1000Base-T ports can supply end devices with up to 30 W per port.

Two power supply entries permit a redundant power supply to the switch and the connected end devices. If the primary or secondary supply voltage breaks down, an alarm contact can be triggered.

About MICROSENS

Since 1993, MICROSENS GmbH & Co. KG has been standing for fiber optic solutions. As one of the pioneers of fiber optic transmission systems, the internationally active company covers all performance sectors of fiber optic technology. Starting with solutions for future-proof office networking and high-availability in rough environments, the product portfolio ranges from large-scale site networking and interconnection of computing centers up to high-performance Wide Area Networks (WANs). In all these fields of application, MICROSENS provides and ensures efficient, fast, and secure data transfer. As an internationally successful manufacturer, MICROSENS distributes its products on a worldwide scale. In addition to the company headquarters in Hamm in Westphalia (Germany), MICROSENS also has sales subsidiaries in France and Poland to optimally fulfil the diverse requirements of its customers on-site.

About euromicron

euromicron AG is an all-in solution provider for communications, transmission, data and security networks. The network infrastructures of euromicron integrate voice, image and data transfer in wireless mode, via copper cabling, and by means of fiber optic technology. euromicron develops its market-leading applications, such as security, control, health care or surveillance systems, on the basis of these future-safe network infrastructures.

Based on the competence as a developer and manufacturer of fiber optic components, euromicron AG constitutes a company group with a strong growth and revenue potential. The company is listed at the stock exchange and is marked by its nature as a medium-sized enterprise. It focuses on operative growth, integration, as well as on market penetration, internationalisation, and expansion. Further information at www.euromicron.de
